

NAKSHA

V-Guard designs the wiring, then sells the wire

Track 4 · Reimagining V-Guard for an AI Powered Era

V-Guard Big Idea Tech Design Contest 2026

Wire is the most commoditised thing V-Guard sells.

THE PROBLEM

Indian homes are wired from memory.

No drawing. Improvised conduit routes. No record left behind.

42%
Building fires in

attributed to electrical short circuits

And “short circuit” hides the real causes, ageing wiring, overloaded circuits, substandard material, quietly accumulating behind the plaster.

THE FRUSTRATING PART

The rules already exist.

WIRING CODE

national code of practice for wiring installation

EARTHING CODE

national code of practice for earthing

REGULATION

work must be done by a licensed contractor

The gap isn't the code.

Nothing turns it into a drawing anyone will use.

WHAT NAKSHA DOES

One upload. Three outputs.

The first output is a purchase order.
The third one never leaves the house.

THE INSIGHT THAT CONVINCED US

The channel is already built.

WHAT EVERY COMPETITOR SHIPS

LOYALTY POINTS

scan QR · earn · redeem

RR Connect · Finolex Samruddhi

Polycab Experts · Havells

Polycab reaches ~2.5 lakh electricians.

**Nobody has put a tool in that channel
that does any actual work.**

WHAT NAKSHA SHIPS

A TOOL THAT DOES THE WORK

designs the job · sizes the wire

Same channel. Same phones.

Something actually useful in it.

An electrician doesn't want points.

- the load calculation done
- the wire sizes decided
- the material list totalled
- a defensible answer when the owner asks why it costs that much

HONEST ABOUT PRIOR ART

None of it is built for India.

drawer.ai

PDF drawings in → wire lengths + routing out

ISARC 2026

automated outlet-to-circuit assignment in BIM

Dusty Robotics

layouts printed on 300M+ sq ft of slab

All of it serves Western commercial contractors bidding large projects.

None encodes Indian standards.

None is distributed by the company that sells the wire.

WHY IT IS A BETTER BUSINESS

Every design is a purchase order.

The output is a wire schedule in metres, by size.

Specifying the material beats advertising to whoever walks into a shop.

THE ASIAN PAINTS MOVE

escape commodity competition by selling the service, not the tin

Wiring is decided during construction, before the owner has a brand opinion.

Nobody re-shops it. You cannot rewire a finished house.

ON SCALE

We don't propose a national service business.

The design engine scales at software cost. Only the marking needs people, so we separate them.

TIER 1 · APP

Free, all-India

phone AR marking · zero hardware · infinitely scalable

TIER 2 · ASSISTED

Metro cities

trained V-Guard marking partner · paid service

TIER 3 · FLAGSHIP

Showcase only

robotic or laser layout, built for marketing, not margin

Tier 1 carries the strategy. Tier 3 exists to be photographed.

WHAT WE WOULD TEST FIRST

The risk isn't the technology. It's adoption.

Experienced electricians may read this as a challenge to their judgment.

IT MUST SAVE HIM TIME ON DAY ONE
load calculation and estimating, visibly faster, or it gets ignored

Also honest: Indian residential plans are often scanned, hand-marked or dimensionally unreliable, so the first release assumes human confirmation of every inferred room.
